

WHAT THE DATA ACTUALLY SAYS

Sales Roles: High Attrition, Uneven Financial Impact

- For every 3 Sales Representatives, 1 employee leaves the company. This represents not only a headcount loss but also a loss of experience, customer relationships, and accumulated team knowledge.

The data clearly shows two different challenges:

- **Sales Representatives:** have the highest attrition rate at 39.76%, but the overall financial impact is relatively lower (~\$780K), due to smaller headcount and lower average salaries.
- **Sales Executives:** represent the highest total attrition cost at \$3.55M, despite a lower attrition rate (17.48%), driven by a larger workforce (326 employees) and higher salary levels.

Sales Overtime doesn't just add hours — it multiplies attrition risk

- Employees working overtime leave at nearly 3x the rate of non-overtime employees (30.5% vs 10.4%).
- The most critical segment is Entry-Level employees with overtime, where attrition reaches 52.56%, meaning more than half of new employees who work overtime leave the company.

High Performers with Low Compensation

- 51.28% of high-performing employees with low salaries leave the company.

The First Year: The Most Critical Stage in Employee Retention

- Attrition within the first year of employment: 34.88%
- Attrition within the first year in the same role: 27.91%
- Attrition within the first year under the same manager: 28.32%

Manager Quality: The Factor That Decides Who Stays and Who Leaves

- Managers with 11+ years of experience have a very low attrition rate of 3.92%.
- Managers with 0–1 year of experience show a significantly higher attrition rate of 28.32%.
- Highlighting leadership experience as a stronger driver of retention than salary or job role.

Travel Policy: When Policy Design Influences Employee Departure

- Frequent travel is associated with higher attrition (24.91%).
- Limited travel shows lower attrition (14.96%).
- Almost no travel results in the lowest attrition rate (8%).

Delayed Promotion — Unexpected Outcome

- Employees with more than 6 years without promotion show lower attrition (33.33%) compared to recently promoted employees (57.14% in 0 years after promotion), suggesting a potential post-promotion adjustment or expectation gap.

Employees (Under 25 Years Old)

- Employees under 25 show the highest attrition rate at 39.18%, nearly double the next age group (25–34 years: 20.22%).

R&D;: Lowest Attrition, Highest Financial Cost

- R&D has the lowest attrition rate at 13.8% across all departments. However it carries the highest attrition cost at \$7.5M.
- This is driven by:
 - Large headcount (961 employees) & Higher-than-average salaries
- R&D alone costs more than Sales and HR combined (\$5.76M + \$718K).
